

SwapJoys VAT / Invoicing Module

Design Plan Explanation - Walkthrough Document

PREPARED FOR	PREPARED BY	DATE	STATUS
Selim Tesfamariam	Rebing Tech	April 2026	For Review

1. What This Document Is

This document explains the design plan we prepared for the future **VAT / Invoicing Module** on SwapJoys. The HTML/CSS interactive screens, wireframes, user journey map, and platform flow diagram cover the same content, but require opening files. This PDF gives you a single readable walkthrough of every screen, every flow, and every decision point - so you can review it on any device.

Important: This is a design plan only. No code has been written for this module yet. The plan was prepared as an additional deliverable in Milestone 7 based on your VAT/Invoicing scope clarification request. Final implementation depends on your decision on the sales/discount pricing model.

2. Why We Need This Module

The current SwapJoys MVP handles employee experience exchange through a points system. This works for the value-exchange concept, but it does not handle the **company-to-company financial transactions** that real businesses need for tax and accounting purposes.

The VAT/Invoicing Module solves four real-world problems:

- **VAT (MVA) compliance** - When two Norwegian companies exchange paid services, the seller must issue a Norwegian-compliant invoice with the correct VAT rate so both sides can register it for tax.
- **VAT reclaim** - Buyer companies need a proper VAT invoice from the seller to reclaim the VAT amount from the tax office (Skatteetaten).
- **Accounting integration** - Both companies' accountants need clean exports of all transactions formatted for Norwegian accounting software.
- **Audit trail** - Every sale, every invoice, every credit movement must be tracked in an immutable ledger for audit purposes.

3. The Design at a Glance

#	Screen	Purpose	Who Uses It
1	Company VAT Settings	Configure VAT/MVA number and dedicated invoice email	Owner
2	Register Sale Form	Create a new sale to another company with VAT breakdown	Owner / Manager

#	Screen	Purpose	Who Uses It
3	Use Points Form	Use points toward an experience or custom amount	Owner / Manager
4	Invoice Preview & PDF	Norwegian-compliant invoice document	System
5	Invoice Archive - Sent	All outgoing invoices with status filters	Owner / Manager
6	Invoice Archive - Received	All incoming invoices with download/action buttons	Owner / Manager
7	Invoice Detail	Full information about a single invoice	Owner / Manager
8	Swap Ledger (VAT)	Credit balance and full transaction history per company	Owner / Manager
9	Accounting Export	CSV export for Norwegian accounting software	Owner / Manager
10	Register Sale Confirmation	Success screen after sale registration	System

4. Screen-by-Screen Walkthrough

1 Company VAT Settings USER

Located inside Company Profile, as a new "VAT Settings" tab next to "Company Info"

What it does: Lets the company Owner configure two new fields - their VAT/MVA registration number (in Norwegian format NO XXX XXX XXX MVA) and a dedicated invoice email address that all incoming invoices are sent to.

Why it matters: These two fields are mandatory before a company can register a sale or receive invoices. Without them, the system cannot generate a legally valid Norwegian invoice.

Validation:

- VAT/MVA number must match Norwegian format
- Invoice email must be valid format and verified via email link
- Verified emails get a green badge so the owner knows the email works

2 Register Sale Form USER

Accessible from the sidebar and Owner/Manager dashboard

What it does: The host (seller) company fills in:

- **Buyer company** - select from dropdown of companies with verified VAT profiles
- **Sale amount** in NOK (excluding VAT)
- **VAT rate** - dropdown with Norwegian rates: 25% (standard), 15% (food/beverage), 12% (transport/accommodation), 0% (exempt)
- **Link to experience** (optional) - which of the seller's experiences this sale is for
- **Description** (optional, max 500 chars)

Live calculation: The form auto-calculates and displays in real time:

- Amount excluding VAT
- VAT amount (Amount × VAT Rate)
- Total including VAT

Action: User clicks "Preview Invoice" to see the full Norwegian-compliant invoice before submitting, then clicks "Submit & Send Invoice" to finalize.

3 Use Points Form USER

For the buyer side - lets a company use their swap credits/points

What it does: A company that has earned points from prior sales can spend them toward:

- An experience from another company on the platform
- A custom amount (with description)

Why it matters: Companies don't always pay each other in full cash. The Use Points form gives them a way to settle part or all of an invoice using their accumulated swap credits, while still maintaining a clear paper trail with VAT.

4

Invoice Preview & PDF (Norwegian-compliant)

SYSTEM

Auto-generated by the system on every successful sale

What it generates: A PDF invoice that meets Norwegian invoice law requirements (Bokføringsforskriften):

SwapJoys Invoice

Invoice Number:	SJ-2026-00045
Date:	15 April 2026
Due Date:	29 April 2026 (Net 14 days)
Seller:	Acme AS - NO 123 456 789 MVA
Buyer:	Beta AS - NO 987 654 321 MVA
Description:	Team building workshop for 10 people
Quantity × Unit Price:	1 × NOK 4,000
Subtotal (excl. VAT):	NOK 4,000
VAT 25%:	NOK 1,000
Total to Pay:	NOK 5,000
Payment Terms:	Net 14 days
Bank Account:	1234.56.78901

Required fields by law: Invoice number (sequential), invoice date, due date, seller MVA + org info, buyer MVA + org info, line item description, quantity, unit price, subtotal, VAT amount per rate, total, payment terms, bank details.

5+6

Invoice Archive (Sent & Received)

USER

Two tabs - one for outgoing invoices, one for incoming

What it shows: A filterable list of every invoice the company has sent or received. Each row displays:

- Invoice number
- Date
- Buyer (or Seller, depending on tab)
- Amount excluding VAT, VAT amount, total
- **Status:** Sent / Paid / Overdue
- Action buttons: View detail, Download PDF, Mark as paid (sent only), Pay now (received only)

Why it matters: This is the company's invoice register. Owners and managers can see at a glance which invoices are still outstanding, which are paid, and which are overdue.

7

Invoice Detail View

USER

Click any invoice from the archive to open this view

What it shows:

- Full company information for both parties
- All line items with quantity, unit price, VAT rate, line total
- VAT summary breakdown per rate
- Embedded invoice PDF preview
- Complete payment history (when paid, by whom, method)
- Linked experience (if any)

8 Swap Ledger (VAT-aware) USER

A company-by-company ledger showing all credits earned and used

What it shows: Every transaction the company has had with another company, with both points and money columns:

Date	Type	Counter	Party	Points	NOK	Amount	VAT	Running	Balance
2026-04-10	Sale	Issued	Beta AS	+500	+5,000.00	+1,000	500	/	NOK 5,000
2026-04-12	Use	Points	Gamma AS	-200	-2,000.00	-400	300	/	NOK 3,000
2026-04-14	Invoice	Paid	Beta AS	-	+5,000.00	-	300	/	NOK 8,000
2026-04-15	Sale	Issued	Delta AS	+800	+8,000.00	+2,000	1,100	/	NOK 16,000

Filters: Date range, counter party, transaction type (sale, use points, payment received, payment made).

Summary footer: Total points earned, total points used, current balance, total NOK in, total NOK out, total VAT collected, total VAT paid.

9 Accounting Export USER

For the company accountant - exports data ready for Tripletex, Visma, Fiken, etc.

What it does:

- User picks a date range (e.g., January-July 2026)
- User picks an export format (Standard, Tripletex, Visma, Fiken, Custom)
- User clicks "Preview" - sees the data that will be exported
- User clicks "Download" - gets a CSV file ready to upload to accounting software

Columns include: Invoice number, date, counter party, organization number, MVA number, description, amount ex-VAT, VAT rate, VAT amount, total, status, payment date.

10 Register Sale Confirmation SYSTEM

Shown after a sale is successfully registered

What it shows: A green success screen confirming:

- Invoice number generated (e.g., SJ-2026-00045)
- Email sent to buyer's invoice address
- Points credited to seller, debited from buyer
- Quick links: View invoice / Download PDF / Register another sale / Back to dashboard

5. The End-to-End Flow (How a Sale Actually Happens)

- ▶ **Step 1.** Both companies complete their VAT Settings (VAT number + invoice email verified). Without this, no sales possible.
- ▶ **Step 2.** Seller goes to Register Sale, selects buyer, enters amount and VAT rate, optionally links the experience.
- ▶ **Step 3.** Live VAT calculation shows the seller exactly what the buyer will be invoiced.
- ▶ **Step 4.** Seller previews the full invoice, confirms, clicks Submit.
- ▶ **Step 5.** System generates a sequential invoice number (SJ-YYYY-NNNNN), creates the PDF, sends it to the buyer's invoice email.
- ▶ **Step 6.** Both companies see the invoice immediately in their Invoice Archive. Ledger entries are created on both sides.

- **Step 7.** Buyer pays via bank transfer or by clicking "Use Points" to settle from credits. Status updates to Paid.
- **Step 8.** At month or year end, either side exports their accounting CSV and imports it into Tripletex / Visma / Fiken.

6. Open Decisions

Decision	Why It Matters	Status
Pricing model - flat 50% discount, full market price, intermediary, or another model?	Determines what "amount" means on the Register Sale form and how invoices flow between parties.	Pending your decision
Invoicing party - direct (Company A invoices Company B) or intermediary (everyone invoices SwapJoys)?	Determines whether SwapJoys needs its own VAT registration and changes the invoice template completely.	Pending your decision
Mandatory or optional VAT setup - block all sales until VAT settings are verified, or allow soft start?	Affects onboarding friction. Stricter is safer for compliance, lighter is friendlier for new companies.	Recommend mandatory
Accounting export format - support Tripletex / Visma / Fiken from day one, or only generic CSV?	Affects implementation hours. Generic CSV is faster; provider-specific is friendlier for accountants.	Recommend phased

7. What Happens Next

1. You review this PDF and the existing HTML/CSS designs in the VAT Invoice Plan folder.
2. You decide on the pricing/sales model (flat 50% discount, intermediary, or another option).
3. We have our scheduled call (Thursday after 19:00 CET or Friday from 16:00 CET).
4. Based on your decision, we adjust the design where needed (most adjustments are minor - the framework holds).
5. We finalize the scope, hours, and timeline for the VAT/Invoicing Module as a separate milestone (M10 + M11 in the scope clarification document).
6. Milestone 8 (the original Tax Part 2 + manual subscription invoice + launch) resumes once the pricing decision is locked.

Files in the VAT Invoice Plan folder:

- **VAT-Invoice-Plan-Explanation.pdf** - this document (readable on any device)
- Htmlcss design templates.html - interactive UI mockups (open in any browser)
- Wireframes.md - text wireframes for all 10 screens
- User Journey Map.md - phase-by-phase user flow with success criteria
- Platform Flow Diagram - VAT Invoicing Module.md - Mermaid system diagrams

Prepared by Rebing Tech, April 2026. This document is an internal explanation of design intent and does not constitute a binding scope or quote. Final scope, hours, and pricing for the VAT/Invoicing Module will be confirmed after the pricing-model decision and signed off in a separate addendum to the development agreement.
